<u>Volunteers needed</u>

for Research on Deployment Exposures and Lung Health

Eligibility:

Veterans who deployed to Afghanistan/Iraq (post-9/11) who may have been exposed to burn pits, dust/sand and air pollution during their deployment. The purpose of this study is to determine potential effects of deployment exposures on the lungs, heart and blood vessels.

Duration:

Your participation may involve 1–3 sessions lasting 2–3 hours each session. Sessions will include questionnaires, exercise and breathing assessments. Additional follow-up testing may occur in the future. In appreciation of your time you will receive compensation.

Location:

War Related Illness and Injury Study Center VA New Jersey Health Care System 385 Tremont Avenue, 11th floor East Orange, New Jersey 07018 Principal Investigator: Michael Falvo, PhD

Please call the War Related Illness & Injury Study Center and ask for the *Pulmonary Vascular Study Research Assistant*:
